

New Java Project

Create a Java Project

Create a Java project

Project name: FirstJavaProject

☒ Use default location

Location: C:\Work_Space\Java_060\Projects\FirstJavaProject [Browse...](#)

JRE

☐ Use an execution environment JRE: JavaSE-1.7

☒ Use a project specific JRE: jre7

☐ Use default JRE (currently 'jre7')

Project layout

☐ Use project folder as root for sources and class files

☒ Create separate folders for sources and class files [Configure default...](#)

Working sets

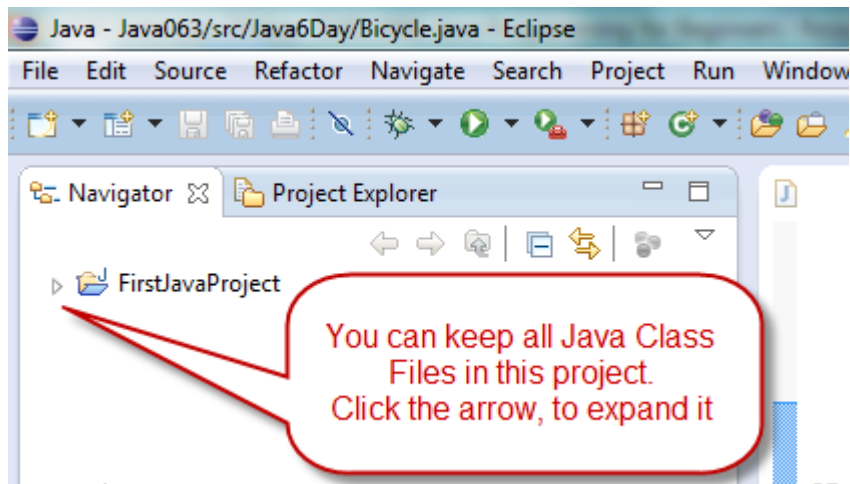

☐ Add project to working sets

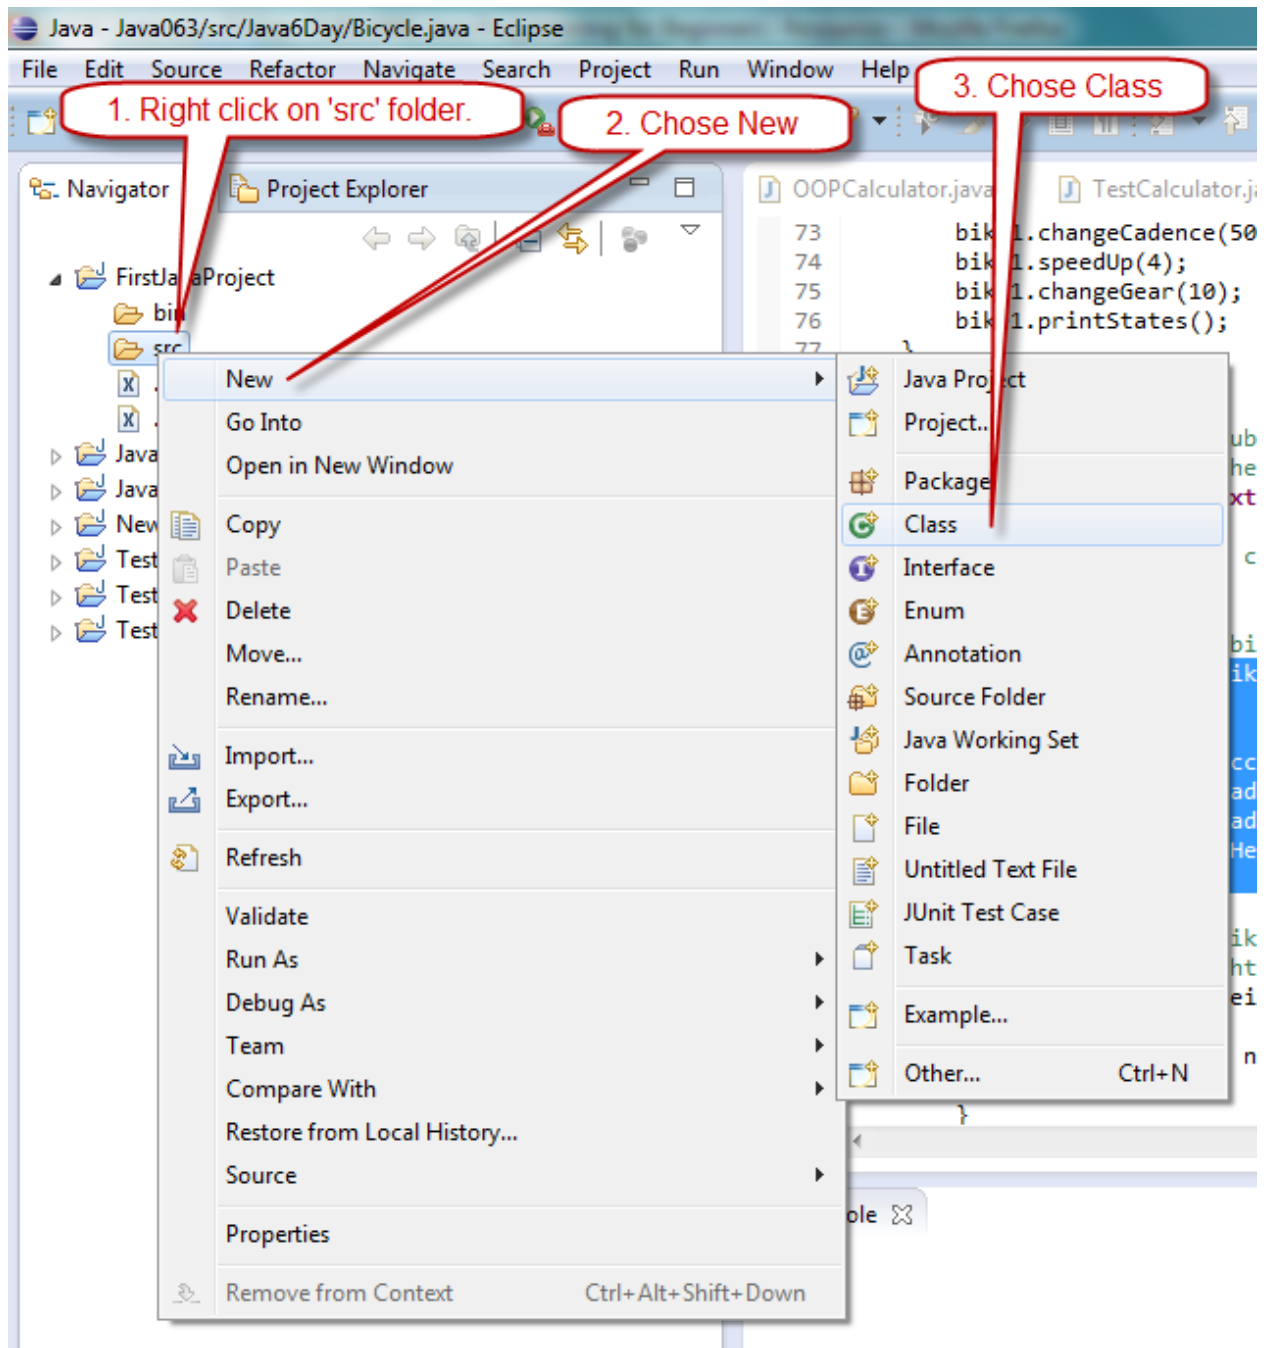

Working sets: [Select...](#)

[?](#) [< Back](#) [Next >](#) [Finish](#) [Cancel](#)

Type the name of your project:
You can give any name of your choice.

You can leave rest of the choices as default and press next.

New Java Class

Java Class

⚠ The use of the default

1. Java Class is the disk file where you will write your java code you learn in this class.
Give it a suitable name of your liking

Source folder: FirstJavaProject/src Browse...

Package: (default) Browse...

☐ Enclosing type: Browse...

Name: FirstJavaFile

Modifiers: ☒ public ☐ default ☐ private ☐ protected
☐ abstract ☐ final ☐ static

Superclass: java.lang.Object Browse...

Interfaces: Add... Remove

Which method stubs would you like to create?

☒ public static void main(String[] args)
☐ Constructors from superclass
☐ Inherited abstract methods

Do you want to add comments? (Configure templates and default value [here](#))
☐ Generate comments

3. Click Finish

Finish Cancel
